

Why DTLP program ?

After working with the SAP ERP hub for the last 20 months, I have adequate technical expertise in the ERP space around processes and their implementation along with exposure towards the functional aspects of resource planning. I have worked with GE site clients understanding the processes, underlying problems, modelling the solution and delivering the outcome. Along the process I have understood the functioning of businesses at the ground level and how to go about implementing innovative solutions for their business complications. I have also worked on various GE Global integrations and consolidation initiatives/programs like Smartshop and PTR Retrofit. I have been part GE Employee Engagement initiatives and Hangout Volunteering team. From here on I look towards capitalizing on this by moving ahead with the DTLP program which will provide a more structured approach to my career and the right opportunity to my aspirations.

While interacting with the leadership, I have always been fascinated about their business valuation, strategic thinking & understanding and always felt a disconnect around this between them and me, which now, the program would help me fill that space. I will have practical exposure on the real-life case scenarios and insights to decision and strategic expertise. The program will help me gain a more holistic approach towards business planning and management where I would use my current expertise and enhance it with the business knowledge. I would also understand how to not just build a great product but also scale and market it rightly in the industry. I do have knowledge about STP implementation and various portfolio analysis tools like BCG matrix, but I am yet to have an industry level hands-on around the same. The program will help me gain a more projected learning graph where I would also be able to share my knowledge with the peers around me and learn from them. It would also refine my personality as a leader. 8-11 years down the line, I see myself leading one of the digital tracks at GE and this program will give the right path to my aspirations.
